

ELITE GATES

GATE ACCESSORIES

Below is a breakdown of all the accessories we have available for your automatic gate. Please speak to us if you would like to know more about any of these.

SAFETY BEAMS

Safety beams prevent the gate from opening or closing if something is obstructing its path.

Sliding gates utilise one set of safety beams on front of the gate, stopping the gate from closing into an object.

Swing gates utilise two sets, one in front, and one behind to ensure the gate doesn't open or close into an object.

We highly recommended safety beams if you want to have gates auto close, or if the driveway is short.

Safety beams do add a layer of complexity. We do not suggest for installs with ample room before and after the gate, where an autoclose is not wanted.

ADDITIONAL REMOTES

Two remotes are included with any automation package. Additional remotes can be purchased as spares or for other people/vehicles.

WALL MOUNTED REMOTE

An internal button is usually mounted inside the front door to operate the gate.

KEYPADS

Keypads with a pincode are used to open the gate with a pin code. Keypads can be programmed to one or multiple functions, i.e. fully open gate, partially open gate, open and hold etc.

Multiple pin codes can be added to perform the above functions and can be relatively easily added, changed or removed.

The keypad can be mounted to a wall, or fence, or we can install a gooseneck post further up the driveway.

EXIT BUTTONS

Exit buttons are to open the gate from inside the property. This could be installed near the gate or inside. Note that exit buttons reduce security as someone could jump the gate and then open the gate.

A secure alternative is to install another keypad inside the property.

WIRELESS GSM INTERCOM - *Requires cell phone coverage at gate*

The Wireless GSM Intercom is an audio intercom system which includes two call buttons at the gate. When a visitor presses the call button, it will dial a phone number which can be answered as a regular phone call. The gate can be opened during the call by pressing the # button on your phone

This intercom is tied into the gate automation, therefore, the status of the gate (open/closed) can be checked, and the gate can be opened/closed with the G-Remote app.

The unit comes with a sim card with \$74 credit already loaded. You then pick a plan based on what you think the usage will be. It charges the account every month, using the credit that's loaded against the account. If you go over the monthly allocated amount it will automatically charge the credit card another monthly amount. Based on 2 "calls" per day that yearly cost would be \$261.00.

WIRED VIDEO INTERCOM

A Panasonic intercom system that includes a screen inside the home which allows you to see and speak with people at the gate, and also open the gate from inside. A camera and call button is mounted near the gate for visitors.

Note, this is only available as a wired system. A cable needs to be run from gate to inside the house which may not always be achievable.

EXIT LOOP

Gate will open automatically when a vehicle passes over the exit loop installed on the driveway.

GATE LOCK

A magnetic or mechanical lock that automatically releases the gate when the button is pressed to open. These can be added to swing or sliding gates for additional security.

A form of gate lock is required on most larger swing or double swing gates.

Elite Gates will advise during the quote.
